

Production Run Sampling - Concentrate

The minimum amount for testing for raw concentrates is at least 5g, regardless of the production run size, as anything less than 5g has been determined by the Department to be insufficient volume for full testing. With the weight of a production run of concentrate being limited to 2.2lbs, the maximum amount of concentrate required for a production run sampling is 10g.

Production run sample = 5 grams

Production run sample = 6-10 grams
