Subject: Photo Requirements with application

Request to expedite the application process

by allowing the applicant to submit photos and copy of drivers license at time of submitting fingerprinted which will free up your bandwidth and make it more convenient for the applicant to complete the application process without logging into you system multiple times to complete the presccess You now take the money at end of application, and it would seem to make more since to upload all copies to complete the application at the end of the process

1 Log in to fill out application

2 go get copy of license

Go get photo

Log back into CCB to upload license, photo,

Log back in once application is approved, to get fingerprint verification form

Go to get fingerprinted

Log back in to upload the fingerprint verification form

Wait for fingerprint verification form to print

Take to fingerprint facility

Log back in to upload fingerprint receipt

Send money

Wait for temporary card

Get a job or continue working

Much more efficient

Log in to fill out application

Get check list of needed files to upload including the fingerprint verification form

Get drivers license copied get photo get fingerprint verification form

GET fingerprinted and photo at same time as we all are capable of providing photos at time of fingerprinting

As opposed to looking for a passport style photo to upload in order to get fingerprint verification form

Upload all required documents including fingerprint verification form at same time

Send money get temporary card go work or get job

As example I have client coming in next week from 3 states, the compliance officer is trying to get all copies together to fill out the applications. So they can all come in to be printed. If all required documents were uploaded with the fingerprint verification it would be a whole lot more efficient
